President Obama to Announce Historic Carbon Pollution Standards

-, 03.08.2015, 22:28 Time

USPA News - Today at the White House, President Obama released the final Clean Power Plan, a historic step in the Obama Administration's fight against climate change. The final Clean Power Plan sets flexible and achievable standards to reduce carbon dioxide emissions by 32 percent from 2005 levels by 2030, 9 percent more ambitious than the proposal.

By setting carbon pollution reduction goals for power plants and enabling states to develop tailored implementation plans to meet those goals, the Clean Power Plan is a strong, flexible framework that will: Provide significant public health benefits – The Clean Power Plan, and other policies put in place to drive a cleaner energy sector, will reduce premature deaths from power plant emissions by nearly 90 percent in 2030 compared to 2005 and decrease the pollutants that contribute to the soot and smog and can lead to more asthma attacks in kids by more than 70 percent. The Clean Power Plan will also avoid up to 3,600 premature deaths, lead to 90,000 fewer asthma attacks in children, and prevent 300,000 missed work and school days. Create tens of thousands of jobs while ensuring grid reliability; Drive more aggressive investment in clean energy technologies than the proposed rule, resulting in 30 percent more renewable energy generation in 2030 and continuing to lower the costs of renewable energy. Save the average American family nearly \$85 on their annual energy bill in 2030, reducing enough energy to power 30 million homes, and save consumers a total of \$155 billion from 2020-2030; Give a head start to wind and solar deployment and prioritize the deployment of energy efficiency improvements in low-income communities that need it most early in the program through a Clean Energy Incentive Program; and Continue American leadership on climate change by keeping us on track to meet the economy-wide emissions targets we have set, including the goal of reducing emissions to 17 percent below 2005 levels by 2020 and to 26-28 percent below 2005 levels by 2025.
